

Course Descriptions for Single Credit

Fall Semester

Practical Application of High School Math This course is for high school students needing an additional credit in mathematics. The course is designed for students to apply math fundamentals to real-world situations. Students will be expected to provide realistic data to solve interesting math problems as they relate to local, national and world situations.

Fundamentals of Literature and Composition This course is designed for high school students needing an additional English class. In this course students will read, interpret and evaluate the various forms of literature and write compositions/essays based on the interpretations of the literature as well as other forms of personal and public writing.

Spring Semester

Advanced Readings in Literature and Composition. This course is designed for high school students needing an additional English class. In this course is a continuation in which students will read, interpret and evaluate the various forms of literature and write compositions/essays based on the interpretations of the literature as well as other forms of personal and public writing

Advanced Topics in Practical Application of High School Math This course is a for high school students needing an additional credit in mathematics. The course is designed as a continuation for students to apply math fundamentals to real-world situations. Students will be expected to provide realistic data to solve interesting math problems as they relate to local, national and world situations.
